on my computer, can't remember the specs, it's all of 5-10 seconds to render a bare model in Daz, while in Poser 7, it's little over a minute. Same difference between Lighted/Clothed renders. for me, it takes little over 10-15 minutes with a medium resourced scene to render in D/S. in Poser, it takes about 20-25 minutes. and not to mention that Daz starts up immediately, while it takes Poser 7 about 2-3 minutes to start up. What it sounds like to me is that your computer is underpowered. i would try a Demo of Poser 7 to see if it reacts the same way, other wise you have a buggy copy, which isn't impossible.
