OK, I have a question...

I have installed a few "Pose" files in my runtime and when I go to look at them I have a question mark for all the materials and such. I have three of the "Toxic" hair materials and all three sets of those are also question marks.

How do I fix it.... what am I looking for to get those poses and materials to show up?

I think WH told me how he fixed the file I sent him a while back, but I drank that memory away and need new help.

Thanks in advance.
