Ah I remember it like it was yesterday. A friend had bought me a Wacom Graphire 2 as a christmas gift. I took it home, installed the drivers, turned on photoshop..... And holy god, my first thought was I didn't need paper anymore. Everything was so simple and self explanatory that even my 4 year old niece had no trouble using it. It literally made drawing with a mouse feel like drawing with a brick.

That is if you're referring to using a pen tablet.
