As commented my Spidergirl pic is again too dark. And again it's because I correct the gamma on Paint Shop Pro which can't be corrected on a browser.

Fortunately I managed to counter the darkness with my Punisher pic and saved it separately - and uploaded the 'corrected' pic here. Not going to bother messing around with the others.

How does everyone else deal with gamma? Just purposely skew it and fix pics individually if you want to print them or what?

Furious Max - learning as we go
