found another bug, seems the forms do not like any theme except the current default green. if you go in under any other theme. it goes back to the default green AND loggs you out.

so for me to post anything with out getting logged out or getting taken back to where I was I need to use the default green for the Forms and the spiderman theme for posting in images. Maybe take the spiderman theme code as it is and put it in the other themes just replacing the spiderman images with the other theme images? and maybe the code for the default green (in the forms) and apply it to the other themes for whey they are in the forms?
