in poser 7 click the up level icon until you are in the library selection area. it will say poser 7 and downloads by default. the downloads runtime is where the stuff you install thru poser itself gets put if you ever use posers built in zip installer.
anyway from the library selection screen at the bottom is a plus symbol. click it. and pop-up will show up that says add liabrary. search for your poser 6 folder that contains your poser 6 runtime then click ok.
