Despite picking the casafree_hawk theme as my default from the wee menu at the bottom of the home page, the site seems determined that I use the new vista_K theme.

Unfortunately something in this theme seems to cause the site to run a lot slower for me (on both my home and work PCs) and has caused IE to hang on more than one occasion.

I know I can use firefox at home but at work I am limited to IE (corporate environment)

Any thoughts or suggestions (clean ones!)?
