Just want to tell you that the whole site it's very very slow for me... is it going to be like that from now on?

as a gold member you can change themes, we have 12 of themes. if you still have the problem then the answer is yes. the most basic theme named default (although it isn't actually the default theme) is the most basic with next to no graphics or fancy templates so will load the fastest.

The site loads extremely fast for me with the vista-k theme. the average page load time according to our debugging tool is .6 seconds. but I have cable internet with lots of memory and a large virtual memory setting and large temp file cache.

the theme is not going to change anytime soon.

the theme is not causing the site to run slower.

the theme may cause the site to load slightly slower on some machines.

the theme does not like older versions of IE (below 6)
