I've finally talked the wife into letting me get a tablet PC and found a Motion Computing LE1600 at a good price. Its a slate style (no keyboard) w/ a 256 pressure sensitive wacom digitizer.

Anyone using something like this? Does it work ok w/ photoshop? Any info would be appreciated.

It sounds like it is too late to make any difference... especially if you already bought it.

The only information I can share with you is that a family friend has a company that sells Tablet PCs and he told me that it will do anything a regular PC will do. But that is all I know about them.
