Nice purchase Hubcap!

You'll have to let us know how it drives.

I have a question.. maybe a bit stoopid but hey. (my avatars blonde so i'll blame that)
... i've been using my trusty Wacom for a little while now, upgrading them for newer models over the past year and have a CTE-440 at the moment, only problem is i swear Vista is interfering with the drivers as the damn thing wont reconise it..... is anyone else getting this problem with their Wacom? or is it just me being a total girl??
