I picked him up and tried to install him in my runtime and he doesn't work. I keep getting a cannot find file error on it. I have tried to reinstal it several times with no luck I am about ready to delete it and say to hell with it. It doesn't mater if I try it witout the morph pack or with it it all ends up the same, does anyone have any ideas? I am running Poser 7 with update 4 on it.
