After installing I hit the icon on my desktop like I did with V4 and it still will not load. I have been tring to load it into the Poser 7 download runtime where I have all of my other Daz characters installed. I did notice that when I tried to uninstall and reinstall it I did not have an uninstall for M4 after I checked it to make one. I guess I will try to install it into the Main runtime of P7 to see if it will work that way. I will let yu know what happens when I do that.
