In regard to jediadept's spoiler...

Show/Hide SpoilerThey actually did take out multiple cities. There was a shot just before the explosion in NY where they panned across a number of black and white tv monitors showing a number of cities across the globe with similar explosions occurring.

Also, I'm not sure this spoiler tag thing works properly in Firefox. I thought the text was supposed to be invisible until we choose to view it, but all the spoilers are fully visible to me -- they just have a half-centimeter thick black border.

I'm using Firefox 3.0 anmd they work perfect for me.
