To start I pre-sort the files. I created two folders basically a "to install folder" and a "Master folder"(This is where the unzipped/opened installer files will go) Each has this list of folders. (Subject to Taste.

This just works for me.):

Animals

Dawn

Dinosaurs

Dragons

Monsters

Sentai (Japanese Super Hero)

A folder for each generation 3 model

A folder for each generation 4 model

Genesis

Genesis 2

Ghost and Undead

Krystal (From Star Fox)

Lights, Cameras, Shaders

Environments

Furniture

Jewelry

Static Props

Transportation

Weapons

Robots

Toons.

Each of these have 2 Sub-folders each:

Runtime

My Library.

Sadly I know of no easy way to sort the stuff. I am pulling each up one at a time to see where it goes if I can not tell by name, I try the readme files...
