i installed 4.7 and even ordered a few bundles so i have access to a few of my sets

heres a quick question is there anyway to use my textures with genesis 2

There is a little nice trick for making any MAT texture file compatible for g2f, load it onto Genesis, choose the model in the uv maps then save it as a material though the file menu, you can then loaded it on to g2f... this is for cases where you double click a mat file but it doesn't change on g2f om g2m
