I trying to post a last picture for the Monthly challenge?
And it keeps coming up = "Protector detects attacking actions"

I then went and ran two different Computer virus scans and the both come in as Computer id Clean?
So I don't know what to do?

I still have a picture and story description to post before the end of the month?

Please Advise ASAP Thanks?!?!

It seems our Protector software don't like name files with dots in them.

Change the name of the file to something without the dots and it should upload fine.

Instead of "**Dr.Goldfoot and the Bikini Machine.jpg**" change it to "*Dr Goldfoot and the Bikini Machine.jpg*" and it should work...

Oh, the name files with underscore are OK too. Like this "*Dr_Goldfoot and the Bikini Machine.jpg*"

Sorry about the trouble with it and I thank you for the warning (I didn't know about it), but its a small price to pay to keep the spambots at large, isn't it?
