You got me... XBOX cannot run Photoshop... that is it... I am throwing it away...

Microsoft is planning the release of 360 to mess with PS3... They are releasing their new system first. (good job) and then releasing Halo 3 the day PS3 comes out. And if it does half as well as Halo 2 did... watch out... wow!

My PC is 8 years old... it won't even run... much less a video game... it keeps making this funny "whirring" sound. Can't be good.
